EXPERIENCE

Web Application Developer (Co-op)

May 2025 – Sep 2025

Haver & Boecker

St. Catharines, ON

- Developed full-stack enterprise applications using C#, ASP.NET MVC, and SQL Server, supporting internal business operations.
- Designed and implemented RESTful APIs to enable seamless communication between front-end and back-end systems.
- Improved system efficiency by integrating multiple scheduling systems into a unified platform, reducing manual tracking processes.
- Deployed & maintained applications on Microsoft Azure, monitoring performance and resolving production issues.
- Collaborated in an Agile sprints, contributing to code reviews, debugging, and feature development.

Web Developer

July 2022 – July 2023

BSR Limited

Lagos, Nigeria

- Built responsive web applications using HTML, CSS, and Javascript with a mobile-first approach.
- Collaborated with developers using Git and Github for version control and team workflows.
- Ensured data integrity and application reliability through proper validation and backend logic.
- Presented project updates and system solutions in team meetings, building confidence and alignment across technical and business teams.

PROJECTS

Machinery Schedules Integration Project | [Haver Project on Github](#)

- Integrated multiple scheduling systems into a unified web application, improving project tracking and workflow efficiency.
- Designed a structured data model with authentication and role-based access.

- Implemented Excel/CSV export functionality for reporting and data analysis.
- Debugged and optimized production issues using IIS logs and Azure monitoring tools.

My Personal Website | [Portfolio live link](#)

- Designed and deployed a responsive portfolio website using Angular and Tailwind CSS to showcase project and technical skills.
- Implemented clean UI/UX principles with a focus on performance and accessibility.
- Integrated project highlights, Github links, and contact features to support professional branding.

Restaurant Reservation System | [Restaurant Project on Github](#)

- Built a full-stack reservation system with admin roles and analytics dashboard.
- Integrated AI-assisted booking using OpenAI to enhance user experience.
- Designed scalable backend logic for managing bookings and availability.

Employee Payroll System | [Payroll Project on Github](#)

- Developed a payroll system using object-oriented design in C#.
- Built a UWP interface to manage employee data and salary calculations.

Activities

Client Presentation at Haver & Boecker: Presented project storyboards to clients to improve understanding and collaboration.

Hackathon at Encode: Participated in a competitive hackathon, building innovative solutions under time constraints.
